** Based on PIMCO managed portfolios with at least a 5-year history. The after-fees performance of each portfolio was compared to the portfolio's primary benchmark. If the after-fees portfolio performance was greater than the benchmark performance for a given period, the assets in that portfolio were included in the outperforming data. Benchmark outperformance indicates the performance of a portfolio as compared to its benchmark. As such, it does not indicate that a portfolio's performance was positive during any given period. For example, if a portfolio declined 3% during a given period, and its benchmark declined 4%, the portfolio would have outperformed its benchmark, even though it lost value during the period. Certain absolute return oriented portfolios contained within the data may inflate the data either positively or negatively due to the low return/volatility characteristics of the primary benchmark. For example a portfolio measured against 3-month USD Libor would be more likely to out- or under perform its benchmark. **No measure of past performance should be understood to ensure that future performance will be positive, whether on a relative or absolute basis.**
